

# Workshop on Self-Assembling and Biomimetic Materials

December 15-17, 1997  
Los Alamos, NM

Los Alamos  
National  
Laboratory

## Call for Papers

Abstract deadline:  
October 1, 1997

The latest information  
is available from URL:

Events/Conferences/  
SelfAssembly/](http://cnls.lanl.gov/Events/Conferences/SelfAssembly/)

The left-side image is a minimum energy structure of methanethiol absorbed on gold(111). The yellow globes represent gold atoms, blue is sulfur, purple is carbon, and red is hydrogen. The right-side image is a SAM of dodecanethiol on gold.

## Scope of the Workshop

Research in self-assembling hierarchically structured materials has grown considerably in recent years, encompassing a host of applications from microelectronics and photonics to biomimetic materials. This workshop provides a unique opportunity for the exchange of ideas amongst researchers at the forefront of experimental and theoretical studies in these fields. We have invited speakers from a diverse group of disciplines who develop and employ self-assembling systems for novel applications.

The objective is to develop a comprehensive overview of the field, identifying critical research directions and addressing challenges underlying new applications derived from research in these areas.

## Organizing Committee:

A. R. Bishop, B. I. Swanson, T. Zawodzinski, A. N. Parikh,  
K. M. Beardmore, A. S. Eberhardt, D. Q. Li

## Sessions Include:

1. Mechanism, Structure, and Dynamics in Self-Assembling Systems
  2. Synthetic Strategies in Self-Assembling Materials
  3. Photo-Active Molecular Assemblies
  4. Biomimetic Assemblies: Fundamentals
  5. Biomimetic Assemblies: Applications
  6. General Poster Session
- A free-wheeling panel discussion on the niche applications, relative merits, and problems associated with 'soft' lithography will also be held.

## Invited Speakers Include:

D. Allara, C. Chidsey, T. Marks, R. Nuzzo, N. Peyghambarian, A. Plant, G. Stucky, S. Boxer, P. Fenter, D. Whitten, E. Delamarche, W. Knoll, and B. Liedberg.
